A cornerstone is a ceremonial masonry stone set in a prominent location on the outside of a building to commemorate its dedication. Many cornerstones are inscribed with the construction date of the structure, names of the builders or other significant individuals. Ideal for churches, universities, hotels, or libraries, Stromberg offers a completely

customized cornerstone built to endure exposure to any climate, while maintaining its original beauty.

Rely on our versatile, weather-resistant materials, such as GFRC, GFRP, and Cast Stone, to give you the finish that best enhances your structure.
