CUPOLA

A Cupola is a small dome structure that rests on top of a building. First used in Islamic architecture during the 8th

century, this structure has both practical and decorative functions.

CHURCHES AND CATHEDRALS

A cupola originally referred to the small dome atop cathedrals which allowed light to enter the sanctuary. Some cupolas house a belfry, others have windows, or openings that leave the inside open to air, assisting in the ventilation of the building. A cupola with windows that stretch around the structure are sometimes called lanterns. However, we are probably more familiar with the elegant cupolas that can be found on many community buildings. A pleasing combination of art and utility, cupolas add classic lines and dignity to public buildings. Often used for churches, cathedrals, and palaces, cupolas add importance to any building by making it appear more impressive.

CUPOLA STYLES AND SHAPES

A cupola is usually shaped like a hemisphere. It can be a dome, or a more pointed shape if used to house a bell or serve as an observation area. Lookouts and "Widows Walks" can be entered from inside the building below. Some cupolas are even onion shaped. Evidence of this may be found on "Shalimar", a private residence nestled in the hills of San Jose, California.

GOVERNMENT AND PUBLIC BUILDINGS

Cupolas are a part of the architecture of many prominent government buildings, including the U.S. Capitol building in Washington D.C. State capitals such as Austin, Texas, and Montgomery, Alabama also have state capitol buildings that feature cupolas.

HOSPITALITY LOCATIONS

Stromberg has crafted unique cupolas for world famous hospitality locations like the Atlantis Resort, and the Marriott Hotel, as well as condominiums, courthouses, and banks.

OUR PLEDGE TO YOU

We will work closely with you throughout the process to make sure your finished cupola is exactly what you had envisioned.

A pleasing combination of art and utility, cupolas add classic lines and dignity to public buildings.

Private Residence, San Jose, CA

Some cupolas are onion shaped, as seen on this private residence nestled in the San Jose Hills, CA.

QUALITY · STRENGTH · DURABILITY

GFRP CUPOLAS

Cupolas in architectural fiberglass are very strong, yet lightweight which means faster installation, lower shipping costs, and that less structural framing and support is needed. Casting your cupola in GFRP allows for complex shapes and intricate detail work that would not be possible when crafting out of lesser materials. Fiberglass cupolas and domes are seamlessly constructed; resined together to form a single-piece watertight structure. Low maintenance and extremely durable, GFRP cupolas resist harsh chemicals, salt water, and the environment. Contact the experts at Stromberg today for more information.

Howard Baker Courthouse, Knoxville, TN

BENEFITS

- Cupolas Available in Many Colors, and Finishes
- Wide Range of Quality Materials to Choose From
- Stromberg Offers the Largest Selection of Cupolas Anywhere
- Completely Original Custom Designs
- Multiple Sizes Available
- Free Design Assistance
- More than 30 Years Experience in the Industry
- Our Imaginative Design Professionals Offer CAD Drawings and Specifications

APPLICATIONS

- Churches
- Casinos
- Hotels and Resorts
- Banks
- Government Buildings

Atlantis Resort, Nassau, Bahamas

GFRC CUPOLAS

The most versatile of all materials, Glass Fiber Reinforced Concrete can be cast to successfully mimic many textures and finishes such as stone, terracotta, coral, bronze and wood. Strong, lightweight and durable, GFRC cupolas will stand the test of time, and stand up to the forces of Mother Nature. Made of minerals, GFRC will not burn, and will act as a thermal regulator when exposed to flames, protecting the materials behind it. Cupolas in GFRC can be molded into most shapes, allowing for artistic license in design.
