

BREMERTON NAVAL PARKING GARAGE

bremerton, washington

GFRC

Parking garages are not known to be glamorous additions to a downtown neighborhood, but that doesn't always have to be the case. For this five story parking garage serving the U.S. Navy yard in Bremerton, Washington, the architect made heavy use of Stromberg's expertise in the development of highest quality columns, caps, capitals, and bases. The result is aesthetically pleasing and stately, despite being a completely utilitarian structure.

These items were made using Stromberg's Glass Fiber Reinforced Concrete (GFRC). GFRC is a revolutionary alternative to concrete as it provides the look and tactile qualities of true concrete at a significant reduction in weight.
