The Cheesecake Factory

For the Cheesecake Factory in Southlake, Texas, the newest in the nationwide Cheesecake Factory chain, Stromberg Architectural Production designed, molded, manufactured and installed numerous design elements with a unique flair. Wavy walls, Egyptian inspired columns and ribbed domes were custom designed by our in-house team to match the lavish decor distinctive to the Cheesecake Factory.

Each piece created was custom designed. The columns are topped by custom caps, adorned with stylized leaves in a bas relief, topped with custom Egyptian style faces. Each piece was carefully molded with precision by our expert craftsmen to show even the smallest detail. Stromberg designed interior domes, cast with ribbing, to accentuate the artwork added on-site, and the Stromberg crafted wavy walls add to the illusion of living artwork.

Both within and without, products from Stromberg add to the vibrant design of the Southlake restaurant. Stromberg Architectural Products designed a custom cornice to crown the building, while a matching pediment was used above the entry surrounds, also designed by Stromberg.
