

ORANGE COUNTY COURTHOUSE

orange county, virginia

The courthouse located in Orange County, Virginia is anything but ordinary. Unlike the classic antebellum designs so common throughout the historically southern state, Orange County's courthouse has the look and feel of an Italian villa. It was designed by Charles Haskins of the Washington firm of Haskins and Alexander and built in 1858-59. During a renovation to the building in 2002, Stromberg Architectural Products supplied 52 linear feet of railing manufactured from our Glass Fiber Reinforced Polymer (GFRP).

Stromberg's GFRP is anything but ordinary. Stromberg has the capacity to fabricate GFRP in a manner to emulate a wide variety of natural materials such as wood or weathered stone. GFRP is also very malleable and can be formed in an infinite variety of shapes. Our 100,000 square foot production facility also has the capacity to handle any scope of project.
