

ONE & ONLY PALMILLA

los cabos, mexico

KRYSTACLEAR

As part of the Palmilla Resort in Los Cabos, Mexico, Stromberg Architectural designed and manufactured wall panels, trim and columns for the Agua Restaurant, Bar and Lounge overlooking the Sea of Cortez. The stained glass wall panels were designed to be illuminated from within for muted lighting in fiery reds and yellows to contrast with the azure watery surrounding. Meanwhile, trim located throughout the resort maintains the roots of Old Mexico, like the original resort which was first erected in 1956. The corbels and trim were designed to match the preexisting molding, adding to the ambiance of the old-world hacienda. While dining in the Agua, casually noticed the amount of detail put into the mud and pebble wall which houses the fireplace, along with the trim and pilasters on the same wall - all installed by our highly trained and experienced install crew. As you enter Charlie Trotter's "C" restaurant, notice the molding along the breezeway that was designed, manufactured and installed by Stromberg Architectural Products.

Stromberg Architectural utilized our extensive knowledge of domes to create the perfect kitchen canopy used as the vent hood for the Agua. By working with the specifications of the client, and combining our expert craftsmanship, Stromberg created a fully functional work of art with an exotic appeal. From the purely decorative molding to the 14" wide door surround at the entrance to the Conference Room, Stromberg Architectural provided the details that made the difference in the renovation and addition to the Palmilla Resort.

In order to give you the best service and quality, Stromberg strives to correct any current or potential problems, ensuring long lasting perfection for your structure. For example, the trim at Palmilla was originally designed in carved stone. When the local supplier was unable to meet the schedule and quality requirements, Stromberg was called in. Stromberg immediately launched an around the clock production cycle to ensure customer satisfaction. Stromberg immediately made the necessary adjustments to ensure project completion, while maintaining our stringent quality standards.
