

JOHN B. PIERCE LABORATORY

new haven, conneticut

GFRC

The John B. Pierce Laboratory was founded in 1933 and though an independent research institute, it is affiliated with Yale University. The three-story Georgian-style building is located on the campus of the Yale School of Medicine. The facility conducts groundbreaking research in the areas of cardiovascular biology and circulation, energy metabolism and sensory neuroscience.

Stromberg was called in when the building underwent renovation work in 1992. Stromberg supplied cornice molding for the projects as well as various other elements such as; urns, threshold, wall cap, pier cap, coping, panels, keystones, a chimney cap, sills, fascia and heads.

All of these elements were composed of Stromberg's Glass Fiber Reinforced Concrete (GFRC).
