

# ROSE STATE COLLEGE

midwest city, oklahoma

Stromberg panels and columns can be found on Rose State College's Professional Training and Education Center, which opened in August 2007. The 32,000 square foot facility was designed not only for the school's full time students but also to offer advanced training and educational opportunities to nearby Tinker Air Force Base, and the community.

Stromberg's panels and columns for this facility are constructed from Glass Fiber Reinforced Concrete (GFRC).
