

ST. PETER'S CATHOLIC CHURCH

canton, ohio

GFRP

For the renovation of St. Peter's Catholic Church in Canton, OH, Stromberg Architectural Products designed, molded and manufactured over 3,000 individual custom pieces. Each unique piece was designed and colored to blend with the original structure, including the custom designed rose window, measuring 7 feet in diameter.

Stromberg is the perfect choice for any reconstructive venture. Our molding techniques allow us to precisely match any texture, and our attention to detail means we can provide an exact color match. Our glass fiber reinforced materials have withstood tests both in the lab and in the field, proving our quality. If for some reason damage should occur, products such as our Glass Fiber Reinforced Polymer can be easily patched, reducing later construction costs.
